

Visit to Labsphere

From 10 to 12 September, we at MIT had the privilege of attending the annual dealer training session at Labsphere, Inc., headquartered in North Sutton, New Hampshire, USA.

Labsphere, a key player in the Halma group of companies since its founding in 1979, specializes in the design and manufacture of high-end light measurement solutions. The training provided valuable insights into their full product range, including light measurement systems for the LED/SSL lighting industry, uniform light sources for remote sensing, and imager/consumer camera calibration.

We also explored the properties, advantages and benefits for various applications in diffuse optical coatings and materials like **Spectralon®**, **Spectrafect®**, and **Permafect®**, which set the industry standard for reflectance standards. Additionally, the session covered Labsphere's cutting-edge instrumentation for spectroscopy applications, helping us deepen our knowledge and expand our ability to support clients in diverse fields.

This hands-on experience ensures we can offer our customers here in this region of the African continent the most innovative, reliable solutions in light measurement and reflectance technology. We look forward to leveraging this new expertise to strengthen partnerships and enhance the value we bring to future projects.
